PROFESSIONAL SUMMARY

Backend Software Engineer with 2+ years building production-grade distributed systems, microservices, and REST APIs at enterprise scale. Strong in Java, Spring Boot, Kafka, AWS, Docker, and Kubernetes — with a track record of end-to-end ownership and measurable impact.

EXPERIENCE

Software Engineer | Amdocs

Jan 2026 – Present • Pune, Maharashtra

- ▶ Led microservices migration of a large-scale telecom charging platform — re-architected monolithic Java 8 modules to Java 17 with Spring Boot and Spring Cloud, improving system throughput by 35% and reducing production downtime by 30%.
- ▶ Independently designed and shipped an Auto Rolldown automation tool — now standard across Amdocs Product Management, eliminating 80% of recurring manual effort and saving 5+ hours weekly with zero post-launch reliability incidents.
- ▶ Architected a Dockerized test automation microservice on Kubernetes, exposed via REST APIs and integrated into Jenkins CI/CD pipelines — eliminated manual test execution, enabling self-serve triggering across distributed teams.
- ▶ Built an NLP-based log analysis system that classifies production log severity, surfaces anomalies, and auto-generates PRs for incident resolution — reducing MTTR and improving platform observability.
- ▶ Conducted code reviews, mentored junior engineers on Java best practices and distributed systems design, and collaborated with product and QA stakeholders across the full delivery lifecycle.

Software Engineer | Amdocs

Jun 2024 – Dec 2025 • Pune, Maharashtra

- ▶ Provided Level 3 on-call production support for Kubernetes-based enterprise systems — resolved high-priority escalations, performed root cause analyses, and maintained SLA commitments across a globally distributed environment.
- ▶ Built end-to-end Jenkins CI/CD pipeline automation for Linux-based environments — converted fragile manual workflows into reliable, auditable processes, reducing deployment errors significantly.
- ▶ Developed and deployed a cloud-based encryption/decryption job on AWS, securing sensitive resource values across distributed integration layers in production.

PROJECTS

Payment Gateway System — Personal Project

- ▶ Designed a microservices-based payment gateway supporting multiple banks and inter-bank fund transfers — implemented event-driven transaction processing using Apache Kafka for real-time audit log streaming.
- ▶ Built JWT-based authentication with API Gateway for user and profile management; stored data in MongoDB; ensured service reliability with JUnit5 and TestNG test coverage.
- ▶ Deployed all services on Kubernetes for scalable orchestration and service management.

Ticket Booking System — Personal Project

- ▶ Built secure REST APIs with JWT authentication and role-based access control (admin/customer) for end-to-end ticket booking workflows using Spring Boot and JPA.
- ▶ Used MySQL for structured data and MongoDB for event logs; implemented seat selection, availability checks, admin analytics dashboard, and Swagger API documentation; containerized and deployed on Kubernetes.

Serverless REST API — Personal Project

- ▶ Designed and shipped a serverless backend API on AWS Lambda, API Gateway, and DynamoDB — infrastructure-as-code via AWS SAM and CDK with automated CI/CD for staging environments.

Stock Price Prediction — Personal Project

- ▶ Built a Random Forest model to forecast stock prices from historical market data and technical indicators — backtested across multiple time windows to validate robustness and reduce overfitting.
- ▶ Engineered statistical and technical features to improve signal quality; visualized prediction trends and performance metrics using Matplotlib and Seaborn.

Institution Portfolio Platform — Personal Project

- ▶ Built a full-stack platform (Node.js, Express.js, React.js) with JWT-based authentication — end-to-end ownership from backend API design to frontend delivery, serving real users at NIT Tiruchirappalli.

TECHNICAL SKILLS

Languages: Java (primary — Java 8/17), Python, JavaScript/TypeScript, SQL, C/C++, Bash

Frameworks & APIs: Spring Boot, Spring Cloud, REST API design, Microservices, Apache Kafka, Node.js

Cloud & DevOps: AWS (Lambda, API Gateway, DynamoDB, S3, SAM, CDK), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, IaC

Databases: PostgreSQL, Oracle, MongoDB, MySQL, DynamoDB — schema design, indexing, query optimization

Testing & Quality: JUnit5, TestNG, TDD, unit & integration testing, code reviews, design patterns, SOLID principles

Frontend: React.js, TypeScript

CS Fundamentals: Data structures & algorithms, system design, OOP, DBMS, OS, concurrency, distributed systems

EDUCATION

B.Tech in Instrumentation & Control Engineering | NIT Tiruchirappalli *Aug 2020 – Jun 2024 •*
Tiruchirappalli, India

ACHIEVEMENTS & RECOGNITION

- ▶ Innovation Appreciation Certificate, Amdocs — awarded for independently engineering an automation solution that reduced recurring team effort by 80%.
- ▶ Winner, Spider Club Hackathon — NIT Tiruchirappalli; secured 1st place competing against institute-wide teams.
- ▶ Solved 650+ problems on LeetCode and 1,300+ across competitive platforms — strong DSA and problem-solving foundation.
